

Retention

For applications where the goal is to retain rainwater or stormwater for some type of harvesting and reuse applications, Storm Capture provides cost effective solutions.

Storm Capture allows maximization of developable land by allowing retention to be placed efficiently and easily under parking lots and roadways with very little cover, as well as in non-traffic areas. Structurally efficient precast concrete modules are designed for superior performance. Storm Capture retention systems are available as single modules for small applications, as well as multi-modules systems for thousands or hundreds of thousands of gallons of storage.

Structurally Superior

- Vehicular traffic loading design with as little as 6" of earth cover
- No concrete footing required
- Designed for HS-20-44 for full truck load plus impact

Maintainable

- Designed for maintenance, not replacement
- Optional direct module access
- Open Interior

Efficient

- Large storage capacity
- Not reliant on stone backfill for storage
- Unique Link Slab™ design reduces concrete

Economical

- Competitive installed and lifetime cost
- Typically backfilled with existing site materials
- Large capacity yields smaller footprint
- Rapid and simple installation
